

Increased alveolar soluble Annexin V promotes lung inflammation and fibrosis

Supplemental data - Materials and methods

Human BALF. Bronchoalveolar Lavage (BALF) was performed at the National Institute of Respiratory Diseases (INER), Mexico City, Mexico, as approved by the Ethics Committee at INER. is performed through flexible fiberoptic bronchoscopy under local anesthesia. Briefly, 200 ml of normal saline is instilled in 50-ml aliquots, with an average recovery of 60%–70%. The cells are pelleted from the BALF, and the cell-free supernatant is frozen at -80°C. The control group for Figure 1 included 3 healthy volunteers, and 2 individuals without HRCT-scan evidence of lung disease who required a bronchoscopy for the diagnosis of unexplained cough. In all cases bronchoscopy did not display any abnormality.

Removal of Annexin V from BALF by immunoprecipitation. BALF samples with known elevated Annexin V levels were pre-cleared by mixing with 1 μ g rabbit IgG and 20 μ l of protein A/G agarose at 4° for 30 mins, followed by centrifuging at 1000g for 30s at 4°C. The supernatants were removed to clean tubes and incubated with mixing for 1h with 4 μ g rabbit anti-Annexin V antibody or 4 μ g rabbit IgG, then. 20 μ l of protein A/G agarose was added and the tubes were incubated with mixing for 1h at 4°C. The tubes were centrifuged for 30s at 1000g, and the supernatant carefully removed. PBS washes of the immunoprecipitate were pooled with the supernatant. Successful reduction of Annexin V levels was confirmed by ELISA.

Intra-tracheal instillation of Annexin V solution. 8 week C57 female black mice were anaesthetized with isofluorane and suspended at a 45-60°C angle on an intubation platform. The oropharynx and larynx were visualized with a small animal laryngoscope (LS-2; Penn-Century), and 150 μ l of Annexin V or vehicle (20mM phosphate buffer, 0.02% Tween 80, 130 mM arginine HCl), both diluted in PBS, was then aerosolized and delivered into the airway using a microsprayer tip which was inserted past the vocal cords and into the trachea. The tip was left inside the trachea for a few seconds, then the mouse was taken off the support platform and laid supine on a heating source until the effects of anaesthesia wore off. To mimic a limited chronic exposure, Annexin V was administered to mice twice a week for 2 weeks. The 150 μ l aerosol administered to each mouse contained < 0.006 EU, 4% of the maximum acceptable endotoxin that can be administered to a 30g mouse (20).

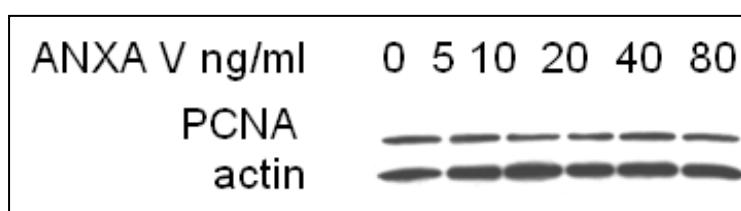

Quantitation of soluble collagen in conditioned medium. Collagen was precipitated from cell-conditioned medium, medium alone, or collagen standards assayed in parallel, by 30 min treatment with 0.1% Sirius Red in saturated picric acid (1ml dye to 50 μ l CM). The collagen was pelleted by centrifuging the samples at 10,000g, and the supernatants were carefully discarded. The pellets were

washed with 0.1M HCl to remove unbound dye, and re-centrifuged. The dye was then eluted from the pellets by vigorously vortexing with 0.5M NaOH, then the solutions were transferred to a 96 well plate and the absorbance measured at 540nM in a plate reader. Values were calculated from a standard curve from collagen standards assayed in parallel.

Supplementary data - Results

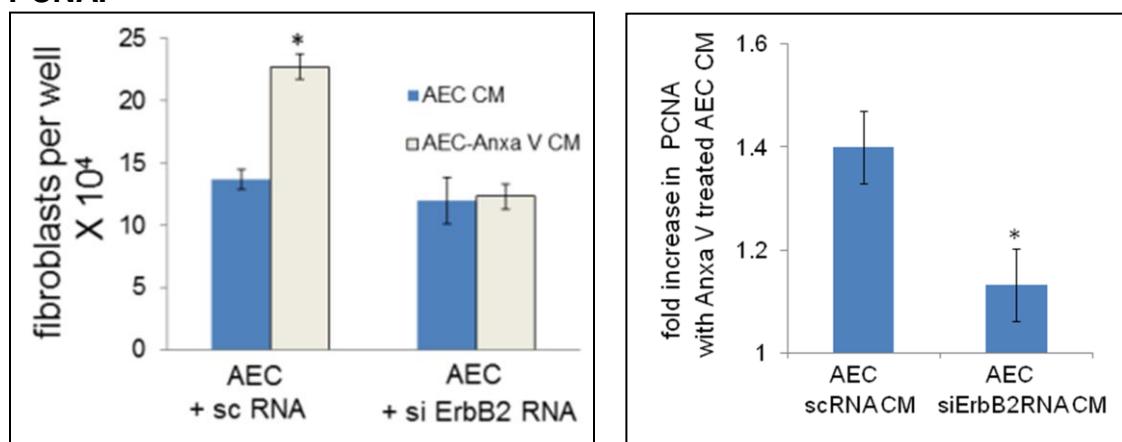

Figure 1. Annexin V does not induce fibroblasts to proliferate

Human fibroblasts (WI38 from ATTC) were plated at a density of 5×10^4 cells per cm², and cultured for 24h \pm 50 ng/ml Annexin V. The cells were then trypsinized, neutralized and counted. Three independent experiments showed no difference in cell counts: untreated: $9.3 \pm 2.2 \times 10^4$ cells/well versus Annexin-treated $9.2 \pm 2.4 \times 10^4$ cells/well. These experiments were repeated with embryonic mouse fibroblasts (NIH3T3 from ATTC) and an adult human fibroblast cell line (CCD-8Lu from ATTC), with the same results (not shown).

Lysates of WI38 lung fibroblasts that had been treated for 24h with increasing doses of Annexin V, added at the time of plating, were analysed by western blot for PCNA expression, corrected for actin. PCNA was not induced with Annexin V treatment. Results were similar when embryonic mouse fibroblasts (NIH3T3) or human fibroblast cell line CCD-8Lu were treated as above (not shown).

Figure 2. CM from Annexin V-treated AEC (MLE15) is less stimulatory to human adult fibroblasts when ErbB2 is silenced in the AEC, as measured by fibroblast cell counts and PCNA.

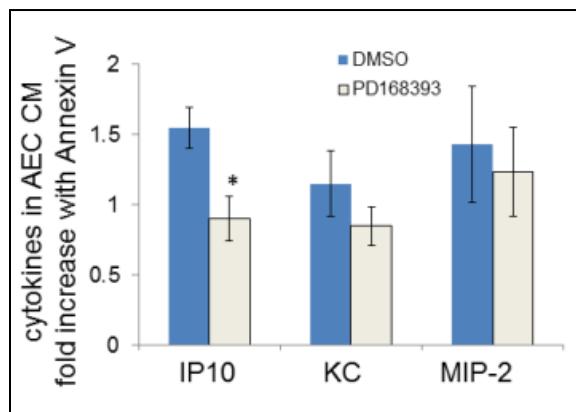

Left panel shows that Annexin V treatment of AEC in the presence of 10 nM scrambled RNA resulted in CM that induced a 1.7 fold stimulation in fibroblast growth, as measured by fibroblast cell counts

after 24h treatment with the CM ($P<0.01$ by ANOVA, followed by Tukey's post hoc test). The Annexin-mediated growth response was abolished when AEC were treated with Annexin V in the presence of 10 nM silencing RNA to ErbB2.

Right panel shows decreased PCNA expression in adult human fibroblasts when treated with CM from ErbB2-silenced, Annexin V treated AEC, versus CM from Annexin V-treated, scrambled RNA treated AEC, as measured by band densitometry, corrected for actin, from 3 western blots, $P<0.02$.

Figure 3. . ErbB RTK inhibition blocks Annexin V-mediated IP10 release from MLE15 AEC, but not the release of KC and MIP-2

MLE15 AEC were treated for 2h \pm 10 μ M ErbB tyrosine kinase inhibitor PD168393, then Annexin V, 50 ng/ml, was added for 24h. Cytokine analysis of CM from 3 independent treatments using mouse cytokine protein arrays (R&D, Minneapolis, MN), showed that Annexin V-mediated IP10 secretion was reduced by PD168393, $p<0.03$, $n=3$, while secretion of the other 2 cytokines induced in AEC2 by Annexin V, KC and MIP2, was not altered.

Table 1. Proteomic screen of epithelial-healing versus pro-fibrotic healing human BALF

27 Cystatin-C OS=Rattus norvegicus GN=Cst3 PE=1 SV=2 [MASS=15437]	CYTC_RAT	15 kDa		4	2	
28 Profilin-1 OS=Rattus norvegicus GN=Pfn1 PE=1 SV=2 [MASS=14957]	PROF1_RAT	15 kDa		4		
29 Protein S100-G OS=Rattus norvegicus GN=S100g PE=1 SV=3 [MASS=9038]	S100G_RAT	9 kDa		4		
30 Selenium-binding protein 1 OS=Rattus norvegicus GN=Selenbp1 PE=1 SV=1 [MASS=52532]	SBP1_RAT	53 kDa		4		
31 Alpha-enolase OS=Rattus norvegicus GN=Eno1 PE=1 SV=4 [MASS=47128]	ENO1_RAT	47 kDa		3		
32 Thioredoxin OS=Rattus norvegicus GN=Tnx PE=1 SV=2 [MASS=11673]	THIO_RAT	12 kDa		2	2	
33 Protein disulfide-isomerase A3 OS=Rattus norvegicus GN=Pdia3 PE=1 SV=2 [MASS=56623]	PDIA3_RAT	57 kDa	TRUE		2	
34 Heat shock protein HSP 90-beta OS=Rattus norvegicus GN=Hsp90ab1 PE=1 SV=4 [MASS=83281]	HS90B_RAT	83 kDa			2	
35 Sulfated glycoprotein 1 OS=Rattus norvegicus GN=Psap PE=1 SV=1 [MASS=61124]	SAP_RAT	61 kDa		3		
36 Transaldolase OS=Rattus norvegicus GN=Taldo1 PE=1 SV=2 [MASS=37460]	TALDO_RAT	37 kDa		3		
37 Malate dehydrogenase, cytoplasmic OS=Rattus norvegicus GN=Mdh1 PE=1 SV=3 [MASS=36483]	MDHC_RAT	36 kDa		3		
38 Protein S100-A11 OS=Rattus norvegicus GN=S100a11 PE=3 SV=1 [MASS=11065]	S10AB_RAT	11 kDa			2	
39 Fructose-bisphosphate aldolase A OS=Rattus norvegicus GN=Aldoa PE=1 SV=2 [MASS=39352]	ALDOA_RAT	39 kDa		2		
40 Rho GDP-dissociation inhibitor 1 OS=Rattus norvegicus GN=Arhgdia PE=1 SV=1 [MASS=23407]	GDIR1_RAT	23 kDa		2		
41 Keratin, type II cytoskeletal 1 OS=Rattus norvegicus GN=Krt1 PE=2 SV=1 [MASS=64830]	K2C1_RAT (+2)	65 kDa		2		
42 Lactadherin OS=Rattus norvegicus GN=Mfge8 PE=2 SV=1 [MASS=47413]	MFGM_RAT	47 kDa		2		
43 Phosphatidylethanolamine-binding protein 1 OS=Rattus norvegicus GN=Peppb1 PE=1 SV=3 [MASS=20801]	PEBP1_RAT	21 kDa			2	
44 High mobility group protein B1 OS=Rattus norvegicus GN=Hmgb1 PE=1 SV=2 [MASS=24894]	HMGB1_RAT	25 kDa		2		
45 Aspartate aminotransferase, mitochondrial OS=Rattus norvegicus GN=Got2 PE=1 SV=2 [MASS=47314]	AATM_RAT	47 kDa		2		
46 Dihydropyrimidinase-related protein 2 OS=Rattus norvegicus GN=Dpysl2 PE=1 SV=1 [MASS=62277]	DPYL2_RAT	62kD				
47 Malate dehydrogenase, mitochondrial OS=Rattus norvegicus GN=Mdh2 PE=1 SV=2 [MASS=35683]	MDHM_RAT	36 kDa		2		
48 Peptidyl-prolyl cis-trans isomerase B OS=Rattus norvegicus GN=Ppib PE=2 SV=3 [MASS=23802]	PPIB_RAT	24 kDa		2		

Table 4. Proteomic screen of CM from human lung fibroblast cell line CCD-8Lu after 24h \pm 50 ng/ml Annexin V

Protein Name	Accession Number	MW	Protein	Grouping	fibroblast CM
			Ambiguity		
1 Serum albumin OS=Homo sapiens GN=ALB PE=1 SV=2 [MASS=69366]	ALBU_HUMAN	69 kDa			83 108
2 Collagen alpha-1(I) chain OS=Homo sapiens GN=COL1A1 PE=1 SV=4 [MASS=138910]	CO1A1_HUMAN	139 kDa			5 23
3 Alpha-2-HS-glycoprotein OS=Homo sapiens GN=AHSG PE=1 SV=1 [MASS=39324]	FETUA_HUMAN	39 kDa			10
4 Lactotransferrin OS=Homo sapiens GN=LTF PE=1 SV=6 [MASS=78181]	TRFL_HUMAN	78 kDa			16 3
5 Collagen alpha-2(I) chain OS=Homo sapiens GN=COL1A2 PE=1 SV=6 [MASS=129287]	CO1A2_HUMAN	129 kDa			3 8
6 Decorin OS=Homo sapiens GN=DCN PE=1 SV=1 [MASS=39746]	PGS2_HUMAN	40 kDa			2 6
7 Beta-2-microglobulin OS=Homo sapiens GN=B2M PE=1 SV=1 [MASS=13714]	B2MG_HUMAN	14 kDa			3
8 Annexin A5 OS=Homo sapiens GN=ANXA5 PE=1 SV=2 [MASS=35937]	ANXA5_HUMAN	36 kDa			5
9 Fibronectin OS=Homo sapiens GN=FN1 PE=1 SV=3 [MASS=262605]	FINC_HUMAN	263 kDa			4
10 POTE ankyrin domain family member F OS=Homo sapiens GN=POTEF PE=1 SV=2 [MASS=121444]	POTEF_HUMAN (+7)	121 kDa			4
11 Sulphydryl oxidase 1 OS=Homo sapiens GN=QSOX1 PE=1 SV=3 [MASS=82577]	QSOX1_HUMAN	83 kDa			3
